Carbonators

Carbonators from leading manufactures that include IMI and SBS can be refurbished and repaired by our technicians.

K-Cooler's vast experience of these leading manufacturers' products, as well as many other carbonators used in the soft drinks industry, means that equipment that would otherwise have to be replaced can often be re-used.

The carbonators are stripped and cleaned which also gives technicians the opportunity to examine them in detail. All the parts are cleaned before being refurbished. All motors, seals, Co2 cans are tested under maximum working pressure if any parts fail we will replace them with new or reconditioned parts as standard procedure.

All carbonators are electrically tested and inspected prior to packing - in addition soda recirc pumps are subjected to a flow rate and pressure test procedure. Data relating to the pump refurbishment process is electronically stored for twelve months.

No more flat soft Drinks!

A Carbonator is a very important part of the dispense system. Some models of **coolers** require the use of a carbonator to mix water and Co2. We repair all models of Carbonator's and we now recondition **procon pump heads** which have a high fail rate on some carbonator models.
